

RF Engineer

August 10, 2007

JOB POSTING

Position: RF Engineer

Opening Date: Immediate

Superior Access Solutions, a new and growing player in the telecommunications integrations arena offers a unique opportunity for a motivated multi-talented Engineering professional.

Employee will be responsible for managing the development of a low cost licensed and unlicensed radio system supporting IP based payloads including real-time multicast video. Duties will include product selection, lab and field testing, test plans, test results, product documentation, training, and RF performance simulation. Additional RF engineering projects will be generated throughout the year as system nears full production.

This position requires a highly motivated and experienced person looking to contribute to the success of our team. Individual must minimally have a Bachelor's degree in engineering, preferably BSEE. Communications skills will be required for interaction with customers and SAS sales staff. RF engineering experience required with unlicensed 802.xx and licensed spectrum experience desired.

Please submit resume' and contact the undersigned for further details.
